

What We Do

[Argo SE](#) is a provider of highly efficient software for financial markets. We strive to produce innovative solutions and offer services that meet ever evolving needs of our customers. Our main focus is development of quality software components for Argo Trading Platform, our flagship product - a flexible, multi-asset, multi-user, DMA solution for professional traders.

Trading Platform

[Argo Trading Platform](#) combines powerful trading front-end, speed of light order routing and order management facility, market data distribution system, sophisticated algorithmic trading server, real-time risk management and rich administrative tools.

Algorithmic Trading

[Argo Robots](#) is a server-based algorithmic (black-box) trading framework. Argo Robot framework is seamlessly integrated with Argo Trading Platform components [Argo Trader](#), [Order Router](#), [MD Feeder](#), and [Risk Manager Server](#).

Matching Engine

[SimEx](#) is a high capacity/low latency matching engine -- the software core of electronic market place. It implements fast price-time priority order matching algorithm, industry standard FIX-based interfaces for order management, FIX/FAST complaint market data distribution, and complete transactional order state and order history storage facility.

We have used SimEx to build a powerful [testing/simulation environment](#) for CME, allowing our customers to test the automatic trading strategies in the most efficient way.

CME Connectivity

Do you need to implement connectivity to [CME Globex](#) trading platform quickly and cost efficiently? We can help!

- We've been developing to [CME iLink Order Entry Interfaces](#) and [CME Group Market Data Platform](#) for the past six years. We can develop a custom connectivity module for your system in a matter of days.
- Our engineers have accumulated a wealth of experience using different FIX engines and popular FIX/FAST implementations from [OCI](#) (QuickFAST) and Onix.
- We are experts in CME conformance testing and CME certification process. Our engineers can help you with each step from establishing CME CERTLink connectivity to actual FIX and market data conformance testing.
- We offer competitive rates and can meet the most aggressive deadlines.

Integration and Custom Development

Argo provides the highest level of expertise in custom development of high-performance trading solutions of various levels of complexity. We build order and execution management systems with portfolio management and algorithmic trading functionality, market simulation and testing systems, low latency market data distribution schemas for the most demanding trading environments.
