All TRAKRS <sup>SM</sup>					na	1.00

Exchange Rules call for the limits to be re-calculated quarterly at the close of business on the day preceding the commencement of a new calendar quarter. Note that stock index price limits are generally revised upwards from the limits that were in force during the previous calendar quarter.

The Exchange's price limits are re-assessed quarterly rather than established at fixed levels insofar as fixed limits are not responsive to on-going market fluctuations. CME Rules are designed to coordinate with circuit breaker provisions as applied by the New York Stock Exchange (NYSE).

## Stock Index Price Limits Revised

S-4731

July 1, 2008

Page 2 of 2

The NYSE enforces limits at 10%, 20% and 30% declines of the Dow Jones Industrial Average (DJIA), calculated at the beginning of each calendar quarter, using the average closing value of the DJIA for the prior month, rounded to the nearest 50 points. Limits enforced during the current quarter are 1,200, 2,400 and 3,600 (limits were at 1,200, 2,450 and 3,650 index points during the previous calendar quarter).

The merger between CME and CBOT means that Dow Jones Industrial Average (DJIA) futures are now an important component of the CME Group's roster of benchmark stock index products. Limits are as follows:

Contracts	5% Limit	10% Limit	20% Limit	30% Limit
DJIA Futures	600	1,200	2,400	3,600

*Please consult the Rulebook for a complete description of the application of the circuit breaker provisions. Or, you may wish to direct any inquiries to Lucy Wang, Research Analyst, Product Research and Development at 312-648-5478.*
