

CME supports file transfer thru SFTP and is available over our Wide Area Network connection as well as via the Internet.

Network details:

The Next Generation environment is at the following addresses for SFTP on our WAN connectivity.

- Production: 167.204.41.33 (tcp port 22)
- Disaster Recovery: 167.204.21.33 (tcp port 22)

For Internet connectivity, no network permissions are needed on the CMEG side, but firm User IDs are only available upon request from CCS at 312-207-2525 or CCS@CMEGROUP.com

PROD/DR

SFTP – sftpng.cmegroup.com
164.74.124.33 and 164.74.122.33
(tcp port 22)

When using SFTP, ssh encrypted software is required for connections. CMEG allows the use of ssh public/private key authentication. If this is something that is needed, the firm can provide their public key to the CMEG. This approach does not require a password when logging on and can aid in automation on the firm's side.

FTP Users,

Please read the below note about accessing data from a CME Group FTP site.

By accessing this FTP site, you acknowledge and agree to the following terms and conditions: (1) The data you receive from CME (the "Data") through this FTP site is confidential, and may be used solely for your own internal business purposes; (2) The Data may not be redistributed to any third party under any circumstances; and (3) You are accessing the Data at your own risk, and fully release CME from any liability with respect to the Data, including without limitation, the accuracy or completeness thereof.

This email is for notification purposes only.

Thank you,

CME Clearing
