

# Pivot Instant Markets and CME Clearing360

Clear CME Group Weather Temperature futures and options block trades with a click.

## An easier way to transfer risk associated with adverse weather events

It is estimated that nearly 30 percent of the U.S. economy is directly affected by the weather. To enable you to hedge the risk your business faces from unexpected temperature extremes, CME Group has developed Weather Temperature futures and options.

## Introducing block trade clearing through Pivot and Instant Markets

Pivot has now connected Instant Markets to CME Clearing360 – CME Group's clearing service for privately negotiated over-the-counter (OTC) and block transactions. This unique offering will allow brokers to electronically submit CME Group Weather Temperature block trades directly to CME Clearing360, resulting in significant benefits for the end user:

- Greater efficiency from straight-through processing of transactions
- Reduced costs due to reduction of administrative efforts
- Ability to manage increased trade volume
- Access to the full benefits and financial safeguards of CME Group's central counterparty clearing

Communicate, track and share quotes and market information in real time

Pivot Instant Markets is the premier product in the OTC derivatives community for real time communication and management of quote data. Using Pivot, brokers and traders can communicate, track and share quotes and market information for a variety of OTC derivatives contracts and strategies in a real-time electronic environment. Built on top of Pivot's global, real-time network, brokers gain transparency for all client activity across the desk while traders benefit from the power of a consolidated market view in one configurable window. For further information on Pivot, visit [www.pivotinc.com](http://www.pivotinc.com).
