

CME FX Link Spread

This topic provides information about CME FX Link. CME FX Link is traded on CME Globex as the differential between CME FX Futures and OTC Spot FX, resulting in the simultaneous execution of FX Futures cleared by CME Group, and OTC Spot FX transactions subject to bilateral OTC relationships. The CME FX Link spreads consist of OTC FX Spot vs. each of the front three quarterly CME FX Futures. Three consecutive CME FX Link months are listed for eligible currency pairs. A new spread will be added two weeks prior to the last trade date of an expiring CME FX Future. The OTC FX Spot leg is only tradeable as part of the CME FX Link spread.

The spreads are traded as a differential between FX Futures and OTC spot, with both legs expressed in OTC quote convention. Therefore, the spread construction is either non-inverted or inverted, depending on whether the quoting convention of the related futures leg is inverted or non-inverted with respect to the typical OTC convention for that currency pair.

With a **non-inverted** CME FX Link Spread (XF):

- The CME FX Future follows the same convention as the OTC market.
- The buyer of the spread buys CME FX futures and sells OTC spot. The seller sells CME futures and buys OTC spot.

With an **inverted** CME FX Link Spread (YF):

- The CME FX Future is inverted from the standard OTC convention.
- The buyer of the spread sells CME FX futures and sells OTC spot. The seller buys CME futures and buys OTC spot.

The following currency pairs are available:

Currency Pair	Inverted/Non-Inverted
EUR/USD	Non-Inverted
GBP/USD	Non-Inverted
AUD/USD	Non-Inverted
NZD/USD	Non-Inverted
USD/JPY	Inverted
USD/MXN	Inverted
USD/CAD	Inverted
USD/CHF	Inverted

Display Factor

When displaying FX Link instruments, CME Group recommends that customer systems use the Display Factor (tag 9787). More information regarding the Display Factor can be found at the following [link](#).

CME FX Link CME Globex Impacts

The following section outlines the functional CME FX Link CME Globex impacts.

MDP Messaging Considerations

For the OTC Spot leg, the Security Definition (35-MsgType=d) will be the only MDP3 message available and no other MDP3 information will be available. For CME FX Future legs on a CME FX Link spread trade, only the MDP3 trade volume will be sent. The CME FX Link spread will have standard MDP3 messaging updates.

iLink Messaging Considerations

On CME Globex for CME FX Link iLink fills, the OTC Spot FX leg fill price (31-LastPx) will be shown as equal to the CME FX Link spread price (reflecting the differential from the assigned FX Futures leg price that the OTC Spot FX fill price will ultimately take), while actual OTC Spot FX leg fill price and full transaction details can be consumed via [CME Straight Through Processing \(STP\)](#). The assigned CME Globex FX futures leg price on a CME FX Link spread fill will have the following pricing priority:

1. the last traded price on CME Globex
2. the best/bid offer
3. the last settlement

This CME Globex futures leg price hierarchy is also referred to as the CME Globex price and is commonly used in spread leg pricing.

Spot Leg Name and Expiration Date Formats

To ensure daily continuity (not actual expiry) of the spot instruments throughout time, all spot instruments will be set with a maturity date (tag 200-MaturityMonthYear) of 12/2050 and an expiration date (tag 865-EventType=7 and tag 1145-EventTime) of 12/31/2050. The actual value date for settlement of spot FX transactions resulting from CME FX Link spreads is as defined by CME Group rules, based on standard market value date and value date roll conventions.

Consequently, with this release the spot leg name will be assigned with the following static iLink tag 107-SecurityDesc and MDP 3.0 tag 55-Symbol values:

Product Name	iLink: tag 107-SecurityDesc MDP 3.0: tag 55-Symbol
Euro / US Dollar Spot FX	EURUSDZ5031
US Dollar / Canadian Dollar Spot FX	USDCADZ5031
British Pound / US Dollar Spot FX	GBPUSDZ5031
Australian Dollar / US Dollar Spot FX	AUDUSDZ5031
US Dollar / Japanese Yen Spot FX	USDJPYZ5031
US Dollar / Mexican Peso Spot FX	USDMXNZ5031
US Dollar/Swiss Franc Spot FX	USDCHFZ5031
New Zealand Dollar/US Dollar Spot FX	NZDUSDZ5031

Display Factor

When displaying FX Link instruments, CME Group recommends that customer systems use the Display Factor (tag 9787). More information regarding the Display Factor can be found at the following [link](#).

Security Exchange

The tag 207-SecurityExchange value "FXFS" is sent for CME FX Link spreads in the MDP3 Security Definition (35=d) message. The tag 207-SecurityExchange value "GLBX" is sent for FX Spot legs in the MDP3 Security Definition (35=d) message.

Tag	FIX Name	Req	Valid Values	Format	Description
207	SecurityExchange	Y	FXFS=CME FX Link spread GLBX=FX Spot leg	Exchange	Exchange used to identify a security.

FX Spot Security Type and Length

The tag 167-SecurityType value "FXSPOT" for the spot instruments is populated for iLink and MDP3 Security Definition (35=d) messages.

Tag	FIX Name	Req	Valid Values	Format	Description
167	SecurityType	N	FXSPOT=FX Spot	String (6)	Indicates instrument is future or option.

Spread Security SubTypes

The tag 762-SecuritySubType value of "XF" is sent for non-inverted spreads in the MDP3 Security Definition (35=d) message. The tag 762-SecuritySubType value of "XF" is sent for inverted spreads in the MDP3 Security Definition (35=d) message with a tag 762-SecuritySubType value of "YF".

Tag	FIX Name	Req	Valid Values	FIX Type	
762	SecuritySubType	C	XF=Non-inverted YF=Inverted	String	Indicates Spread type.

Spot Leg CFI Code

The OTC Spot leg is populated with a CFICode (tag 461) and LegCFICode (tag 608) of "IFXXXP". The following table contains the values for the six-character CFICode string for the OTC Spot leg.

Byte	Valid Values	Description
1	I	I=Spot
2	F	F=Foreign Exchange
3	X	X=Undefined
4	X	X=Undefined
5	X	X=Undefined
6	P	P=Physical

Minimum Allowable Order Quantity

CME FX Link spreads require an order quantity (iLink tag 38-OrderQty) greater than 1. The minimum allowable order quantity for the spread is determined via tag 562-MinTradeVol on the MDP3 Security Definition (35-MsgType=d) message.

CME Globex iLink and MDP3 Messaging Example

The following section illustrates an example of an iLink CME FX Link spread fill.

Example Spread

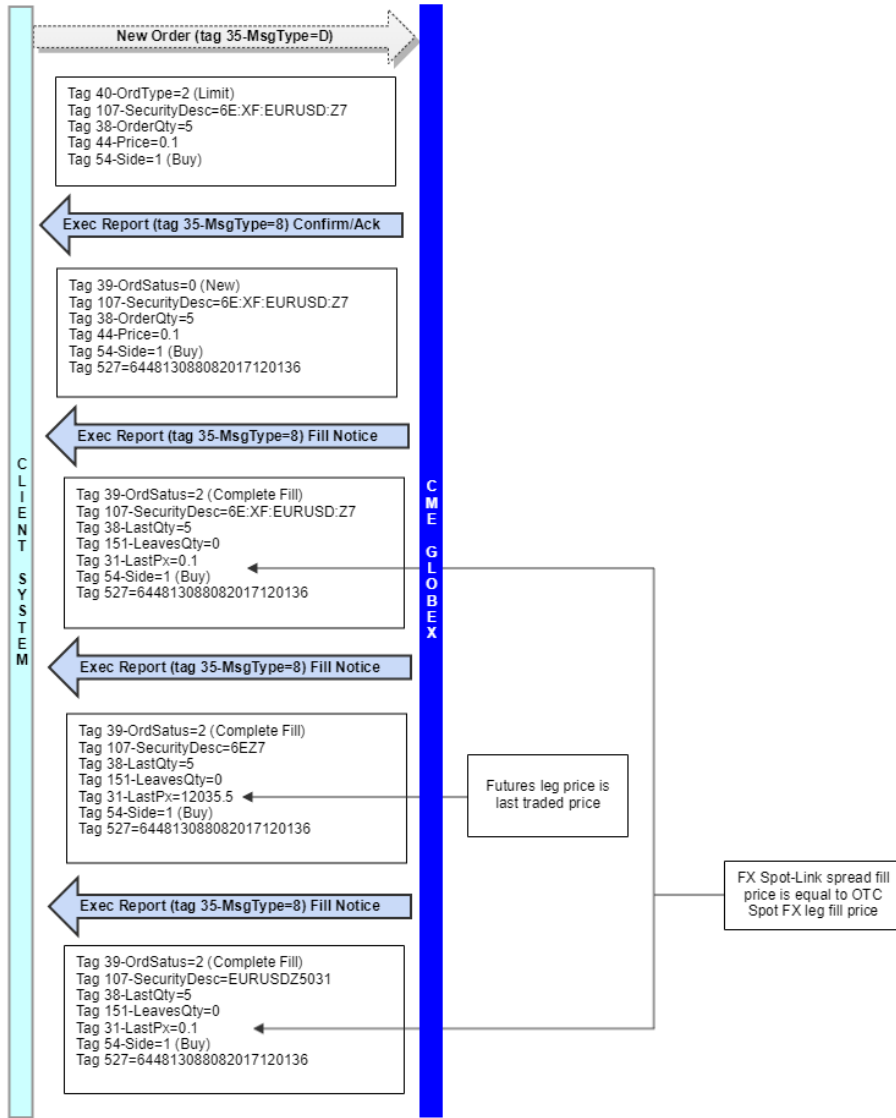

CME FX Link: 6E:XF:EURUSD:Z7

CME Futures Leg: 6EZ7 with the last traded CME Globex price of 12035.5

CME FX Spot Leg (non-tradable): EURUSDZ5031

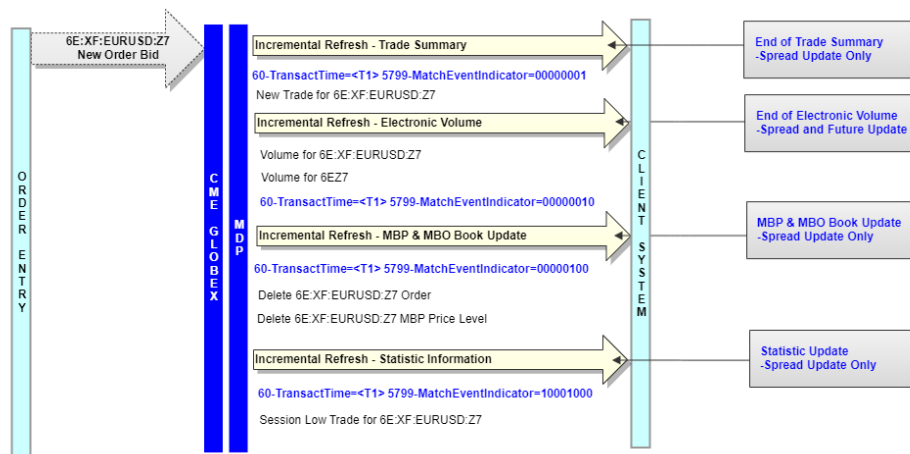

New iLink Order Fill

Over iLink, a buy side order for a CME FX Link spread is sent and is filled. The CME FX Link spread assigned CME Globex fill price of 0.1 is equal to the OTC Spot FX leg fill price. Often front end systems will represent the price in terms of a display price of 0.00001. The display price is calculated by multiplying the tag 9787-DisplayPrice of 0.0001 for 6E:XF:EURUSD:Z7 by the CME Globex traded price of 0.1. The assigned CME FX futures leg price is the last traded price on CME Globex of 12035.5. The actual OTC Spot FX leg fill price and full transaction details can be consumed via [CME Straight Through Processing \(STP\)](#).

Resulting Market Data

The CME FX Link spread trade results in trade, volume, book data and statistic information. Volume information for the spread and CME FX Future is sent. There is no resulting market data for the OTC FX Spot leg.

CME FX Link Spread CME Globex Tag Summary

The following table is an overview of the iLink and MDP3 tags associated with the CME FX Link Spread.

i Display Factor

When displaying FX Link instruments, CME Group recommends that customer systems use the Display Factor (tag 9787). More information regarding the Display Factor can be found at the following link.
