

MDP 3.0 - Mid-Session Order Quantity Update

For BrokerTec US and EU Repo orders where the allowable order quantities change at mid-session, 10:00 AM ET client systems can leverage the following attributes in [Reference Data API](#) to determine the start-up and intra-day minimum quantities:

Product or Instrument	Attribute Name	Description
Instrument	minGlobexOrdQty	Minimum value allowed for a single order.
Instrument	maxGlobexOrdQty	Maximum value allowed for a single order.
Instrument	minIncrementalOrder	Minimum incremental order.
Instrument	minIntraGlobexOrdQty	MidSession value allowed for a single order.
Instrument	maxIntraGlobexOrdQty	MidSession Maximum value allowed for a single order.
Instrument	minIntraIncrementalOrder	MidSession Minimum incremental order.

A new trade date roll will reset the originally defined order quantities for the next trading session open.
